

# Your Workflow: Behavioral Patterns with Claude Code

Module 5 reference

|          |                                    |
|----------|------------------------------------|
| COURSE   | AI Workshop 2.0, Desktop Edition   |
| AUTHOR   | Danny McMillan, Seller Sessions    |
| YOU NEED | A Mac or PC and a paid Claude plan |

## Module 5 reference

**Created:** Monday, 08 December 2025 at 16:20 BST **Purpose:** Show workshop students how simple the human-AI collaboration actually is **Evidence:** 88 conversation sessions, session logs, live demonstration

## The Core Truth: It's Just Questions and Answers

**That's it.** No coding. No complex commands. Just conversation.

# Pattern 1: Question and Response

From today's session:

| YOU SAID                              | CLAUDE DID                                    |
|---------------------------------------|-----------------------------------------------|
| "Let's walk through Module 5"         | Read the directory, showed what's there       |
| "What agent for DVLA data entry?"     | Identified the skill needed, matched to agent |
| "What about Seller Central auditing?" | Mapped financial analysis to Agent-6          |
| "Put this in a markdown file"         | Created the file with diagrams                |
| "Show me in Explorer"                 | Opened the file in VS Code                    |

**No commands memorized. No syntax learned. Just plain English.**

# Pattern 2: Troubleshooting Together

Real examples from session logs:

| PROBLEM                      | HOW IT WAS SOLVED                               |
|------------------------------|-------------------------------------------------|
| MCP server corrupted         | Claude checked file size, restored from backup  |
| Wrong product data in report | Claude re-extracted from source, replaced files |
| Agent not responding         | Claude verified installation path, reinstalled  |
| File not found               | Claude searched with Glob, located actual path  |

**Key insight:** You describe the problem. Claude investigates. You iterate together until it's fixed.

## Pattern 3: Always Log, Always Document

From your 88 conversation sessions:

| WHAT GETS LOGGED       | WHY IT MATTERS             |
|------------------------|----------------------------|
| What was done          | Never lose progress        |
| Files created/modified | Find things later          |
| Decisions made         | Remember the "why"         |
| Next steps identified  | Pick up where you left off |

**Your Master Session Log:** 154KB of documented work, searchable, referenceable.

# Pattern 4: MCPs Enable Everything

## What MCPs let Claude do:

| MCP        | CAPABILITY                     | EXAMPLE                               |
|------------|--------------------------------|---------------------------------------|
| Filesystem | Read, write, organize files    | "Move all PDFs to archive folder"     |
| Notion     | Create pages, update databases | "Add this to my Notion workspace"     |
| Playwright | Automate browsers              | "Fill out this form for me"           |
| GitHub     | Manage repos, PRs, issues      | "Create a branch for this feature"    |
| Firecrawl  | Scrape websites                | "Get all product data from this page" |

**Without MCPs:** Claude can only talk. **With MCPs:** Claude can act.

# Pattern 5: Agents as Team Members

How you use agents (from session logs):

| TASK                | AGENT USED                   | WHAT IT DID AUTONOMOUSLY            |
|---------------------|------------------------------|-------------------------------------|
| Property analysis   | Agent-1 (Trend Researcher)   | Analyzed 29 properties, ranked them |
| Budget calculations | Agent-6 (Analytics Reporter) | Created affordability spreadsheet   |
| Documentation       | Agent-3 (Content Creator)    | Generated checklists and guides     |
| Decision support    | Agent-7 (Feedback Analyst)   | Built family decision framework     |

**Like real team members:** You assign the task, they execute it, you review the results.

# The Complete Workflow

# What Students Should Take Away

## The Simple Version

### What You Do:

- 1. Ask questions in plain English
- 2. Describe problems when stuck
- 3. Say "log this" or "document that"
- 4. Assign tasks to agents
- 5. Review and refine results

### What Claude Does:

- 1. Answers and takes action
- 2. Investigates and proposes fixes
- 3. Creates structured documentation
- 4. Delegates to specialized agents
- 5. Iterates until you're satisfied

## The Technical Foundation (Already Set Up)

| LAYER        | WHAT IT IS               | YOUR INTERACTION    |
|--------------|--------------------------|---------------------|
| MCPs         | Tools Claude can use     | None - just works   |
| Agents       | Specialized team members | "Use agent X to..." |
| Session Logs | Memory across sessions   | Automatic           |
| File System  | Your organized workspace | Claude manages it   |

## Live Example: This Conversation

**What happened in the last 20 minutes:**

1. You asked to return to Module 5
2. I read the directory and explained it
3. You threw curveballs (DVLA, Seller Central)
4. I matched skills to agents
5. You asked for a markdown file
6. I created it with diagrams
7. You asked to analyze your patterns
8. I created THIS file

**Total commands you typed: Zero Technical knowledge required: Zero Results: Two**  
documented teaching materials

# The Proof: 88 Sessions, Same Pattern

From your conversation history:

| METRIC               | VALUE |
|----------------------|-------|
| Total conversations  | 88    |
| Session log size     | 154KB |
| Agents installed     | 27    |
| MCPs configured      | 11    |
| Your coding required | None  |

**Every session follows the same pattern:** Question → Response → Iterate → Document → Resume
