|----------|------------------------------------|
| COURSE   | AI Workshop 2.0, Desktop Edition   |
| AUTHOR   | Danny McMillan, Seller Sessions    |
| YOU NEED | A Mac or PC and a paid Claude plan |

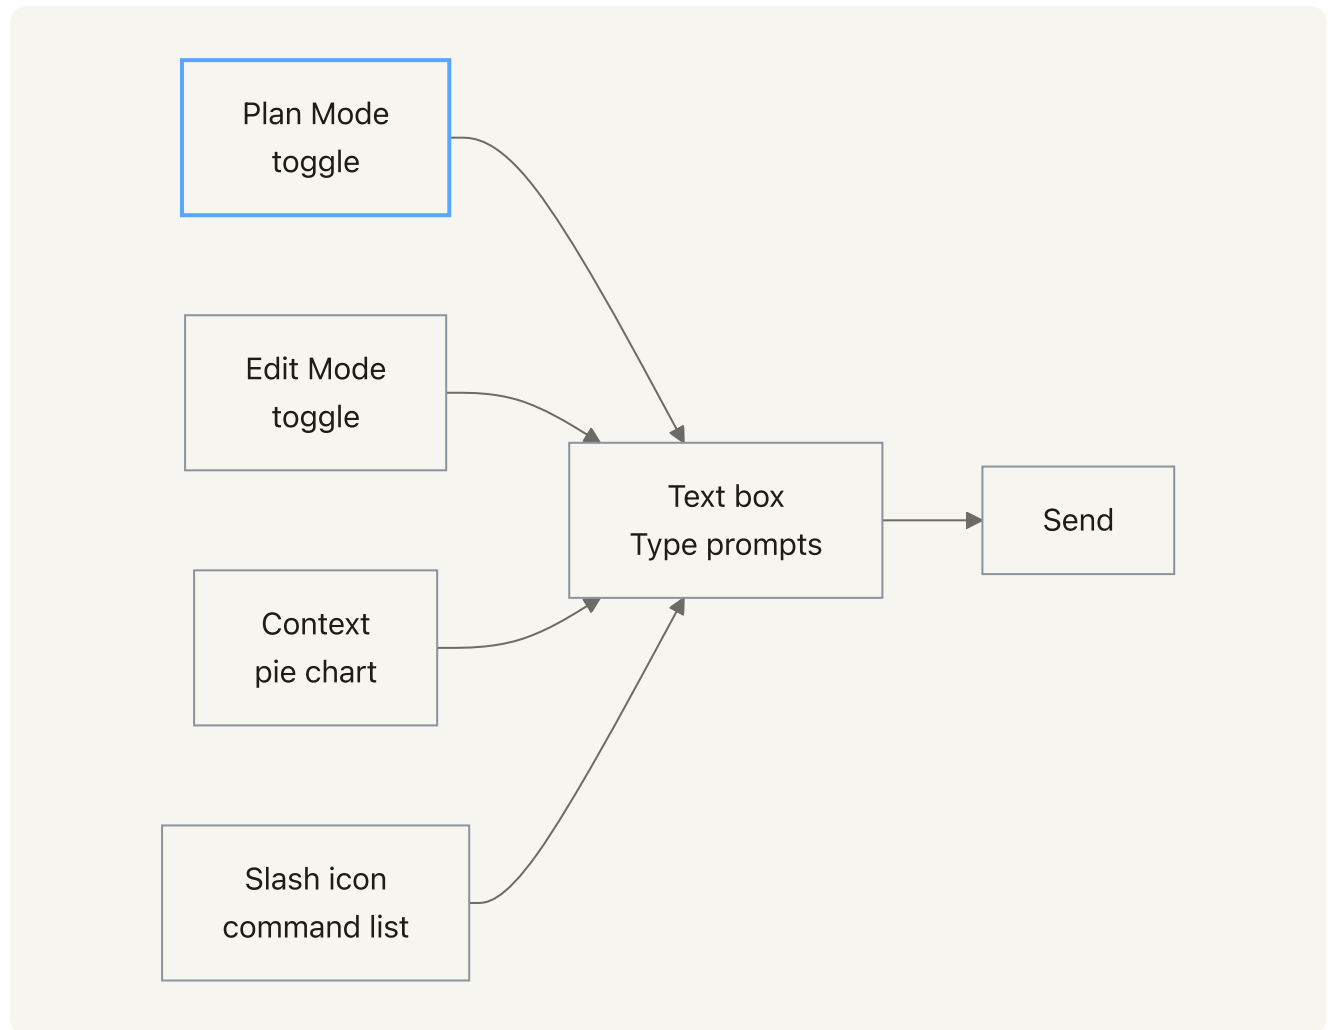

## Additional resources

Quick reference for the built-in commands and chat UI controls you'll use most.

# Essential Slash Commands

| COMMAND  | WHAT IT DOES                                               | WHEN TO USE IT                                                                         |
|----------|------------------------------------------------------------|----------------------------------------------------------------------------------------|
| /compact | Shrinks long conversation history while keeping key points | When your chat is getting long and Claude starts forgetting earlier context            |
| /cost    | Shows your current usage/spend for this session            | When you want to check how much you've used                                            |
| /review  | Runs a focused review on your current draft or content     | After writing something -- get specific issues and improvements, not just "looks good" |
| /todos   | Turns the current discussion into a simple to-do list      | When a chat becomes a plan and you want clear, trackable tasks                         |

## Chat Box UI

# What the UI Controls Do

| CONTROL           | WHAT IT DOES                      | PLAIN ENGLISH                                                              |
|-------------------|-----------------------------------|----------------------------------------------------------------------------|
| Plan Mode toggle  | "Think first, then act" mode      | Claude proposes a plan before making changes. You approve before it starts |
| Edit Mode toggle  | Ask before editing / Auto         | Controls whether Claude needs your permission before changing files        |
| Context pie chart | Shows how full Claude's memory is | When the pie is nearly full, use <code>/compact</code> or start a new chat |
| Slash icon        | Opens the command list            | Click to browse all available commands instead of typing from memory       |
