

Module 5

Agents

COURSE	AI Workshop 2.0, Desktop Edition
AUTHOR	Danny McMillan, Seller Sessions
YOU NEED	A Mac or PC and a paid Claude plan

WHY -- Why This Matters

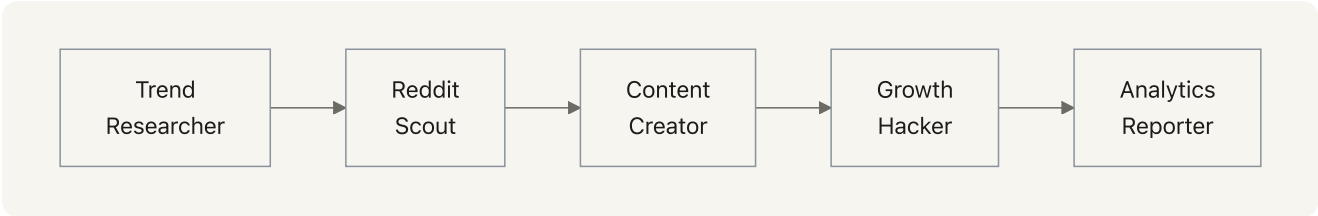

Everything you've built so far -- CLAUDE.md, Master Log, commands, skills, MCPs -- gives Claude general capabilities. But Claude is still a generalist. It knows a bit about everything, nothing deeply about Amazon.

Agents change that. Each agent is a specialist with deep instructions for one job. Instead of saying "help me write a listing" and hoping Claude gets it right, you invoke the Content Creator agent -- and it already knows Amazon's title limits, bullet point best practices, and benefit-over-feature writing.

Before: Claude gives generic advice. You have to explain Amazon context every time. **After:** 8 specialists who already understand Amazon selling. You describe the product, they do the rest.

WHAT -- What You'll Learn

How to install and use 8 custom AI agents built specifically for Amazon sellers.

The 8 Agents

#	AGENT	WHAT IT DOES	EXAMPLE
1	Trend Researcher	Product opportunities, BSR trends, market gaps	"Research trending kitchen gadgets under GBP 30"
2	Reddit Scout	Customer pain points, community sentiment	"Find what people complain about with camping chairs"
3	Content Creator	Titles, bullet points, descriptions, A+ content	"Write 5 bullets for my silicone baking mat"

WHAT -- What You'll Learn (continued)

#	AGENT	WHAT IT DOES	EXAMPLE
4	Growth Hacker	Launch strategy, PPC, ranking, external traffic	"Create a 30-day launch plan for my new product"
5	TikTok Strategist	TikTok Shop, viral content, influencer strategy	"Plan 10 TikTok video ideas for my skincare product"
6	Analytics Reporter	Sales data, PPC metrics, inventory forecasting	"Analyse this month's sales data and spot trends"
7	Feedback Analyst	Review sentiment, quality issues, feature requests	"Summarise the top 5 complaints from these 100 reviews"
8	Support Responder	Buyer messages, returns, negative feedback handling	"Draft a reply to this angry customer about late delivery"

How They Work Together

This isn't 8 disconnected tools. They form a pipeline:

1. **Research phase:** Trend Researcher finds opportunities. Reddit Scout validates demand with real customer language
2. **Content phase:** Content Creator writes the listing. Growth Hacker plans the launch
3. **Scale phase:** TikTok Strategist drives external traffic. Analytics Reporter tracks what's working
4. **Maintain phase:** Feedback Analyst spots product issues early. Support Responder keeps your metrics clean

HOW -- The Self-Drive Process

1. **You read** this README (done)
2. **You give Claude the self-drive file** -- open `AGENTS-SELF-DRIVE.md` , copy the contents, paste into Claude Code
3. **Claude copies the 8 agents** into your `.claude/agents/` folder
4. **You invoke agents by name** -- just mention the agent in your request

Using an Agent

Just mention it by name:

```
Use the content creator agent to write a product description for my bamboo cutting board
```

Or be more specific:

```
Use the growth hacker agent to create a 30-day launch plan for my new product.  
Focus on:  
- Pre-launch buzz building  
- Launch day tactics  
- Post-launch momentum
```

You don't need special syntax. Claude reads the agent file and follows its instructions.

Agent Files

The 8 agent `.md` files live in the `amazon-seller-agents/` folder in this module. Each agent comes in two versions:

- **Standard** -- the full-detail version (e.g., `01-amazon-trend-researcher.md`)
- **Optimised** -- a tighter version for faster responses (e.g., `01-amazon-trend-researcher-OPTIMIZED.md`)

HOW -- The Self-Drive Process (continued)

Start with the optimised versions. Switch to standard if you want more depth.

Tips

- **Start with one agent** -- pick the one you need most right now
- **Be specific** -- tell the agent your actual product and niche
- **Chain agents** -- Trend Researcher finds an opportunity, Content Creator writes the listing
- **Customise them** -- open any agent `.md` file and tweak the instructions for your niche

Common Questions

QUESTION	ANSWER
Where do agents live?	In <code>.claude/agents/</code> in your project or <code>~/claude/agents/</code> globally
Can I delete ones I don't need?	Yes, just delete the <code>.md</code> file
Can I edit an agent?	Yes -- open the <code>.md</code> file and customise the instructions
Can I create my own?	Yes. Copy an existing one and modify it
Do they survive Claude Code updates?	Yes, they're just files in your folder

Example Outputs

The `AGENT-TESTS-AMAZON-SUB-AGENTS/` folder contains real outputs from these agents -- trend reports, feedback analyses, Reddit scout findings. Browse them to see what the agents produce.

WHAT IF -- What This Unlocks

You now have a complete AI-powered Amazon toolkit:

LAYER	MODULE	WHAT IT DOES
Identity	CLAUDE.md (Module 1)	Claude knows your preferences
Memory	Master Log (Module 2)	Claude remembers your progress
Speed	Commands + Skills (Module 3)	Quick shortcuts and multi-step workflows
Power	MCPs (Module 4)	Real-world capabilities (web, files, screenshots)
Expertise	Agents (this module)	Amazon-specific specialists

Everything stacks. An agent can use your MCPs, follow your CLAUDE.md rules, log to your Master Log, and be triggered by a slash command.

What's Next

- **Customise agents** for your specific niche and products
- **Create new agents** from scratch for tasks unique to your business
- **Combine agents into workflows** -- research, create, launch, analyse in sequence
