

AI Workshop 2.0

Desktop Edition: start here

COURSE	AI Workshop 2.0, Desktop Edition
AUTHOR	Danny McMillan, Seller Sessions
YOU NEED	A Mac or PC and a paid Claude plan

Desktop Edition: start here

A GBP 1,000 course. Free. Self-drive. No support.

This is the full Claude curriculum from the Seller Sessions Live AI Workshop. It takes you from zero to a working AI-powered project setup in one sitting.

There is no instructor. There is no helpdesk. You hand Claude one file from each module, click your answers, and Claude builds everything for you.

You will not type a single command anywhere in this course.

The two files in every module

Every module folder holds exactly two files. The file name tells you what to do with it.

FILE	WHO IT IS FOR	WHAT YOU DO
MODULE-N-READ.pdf	You	Read it first. It explains what you are about to build and why
MODULE-N-GIVE-TO-CLAUDE.md	Claude	Drag it into the chat. Claude reads it and does the work

You never have to open the .md file yourself. Its whole job is to be handed over.

How every module works

The same five steps every time, so it becomes muscle memory:

1. Open Claude Desktop and click the **Code** tab.
2. Pick your `Claude-projects` folder. First time only, it remembers after that.
3. Read the module's `READ.pdf`.
4. Drag the module's `GIVE-T0-CLAUDE.md` file into the chat, add the line printed at the top of this page, and press send.
5. Click your answers on the cards Claude shows you. Check the result before moving on.

The line you send with every GIVE file:

Follow the instructions in this file, one step at a time.

Module map

Work through these in order. Each module builds on the one before it.

Module-000	Install Claude Desktop your folder	Download, sign in, open the Code tab, pick
Module-1	CLAUDE.md instructions	Your project config file: Claude's standing
Module-2	Master Log did	Session tracking, so Claude remembers what you
Module-3	Slash Commands	Custom commands that automate repetitive tasks
Module-4	Connectors Gmail, Notion	Let Claude reach outside your folder: Drive,
Module-5	Agents	Specialists that run multi-step work for you
Module-00	VS Code and Copilot	OPTIONAL, do it later or never

Module-00 sits at the end on purpose. Claude Desktop opens and edits your files itself, so you do not need a code editor to finish this course. Module-00 is there for the day you want one.

Prerequisites

Before starting Module-000, you need:

- A Mac or a Windows PC
- A paid Claude plan (Pro or Max). The Code tab is not on the free plan
- About 4 hours, or two sittings of 2 hours

That is the whole list. No code editor, no developer account, nothing to install beyond Claude Desktop itself.

A note on Cowork

Cowork is the same Claude with the same skills, aimed at documents and desktop apps rather than a project folder. Everything you build in this course works there too. You do not need it to finish the course, and the course does not teach it.

Already using Claude in a command line?

Nothing here conflicts with that. Both routes write the same files in the same places:

`CLAUDE.md` , `.claude/commands/` , `.claude/skills/` and `~/.claude/agents/` . You can move between the two whenever you like, and the April 2026 command-line edition of this course is still available on request if you prefer it.

Tips

- **Go in order.** Module-1 needs Module-000 done first. Module-5 needs everything before it.
- **Read the PDF first.** Every module explains *why* before showing *how*.
- **Trust Claude.** The GIVE files are tested. If Claude asks a question, answer it. If something breaks, paste the error back to Claude.
- **Take breaks.** This is 4 to 6 hours of material. Two modules per sitting is plenty.
- **Chat getting long?** Start a new session. Your `CLAUDE.md` and Master Log carry across, which is the whole point of Modules 1 and 2.
- **English not your first language?** Ask Claude to translate any module into your language before you start. The GIVE files work in any language.
